Work: B2B Contractor (Yerevan, GMT+4) · No visa sponsorship required

SUMMARY

Senior Fullstack Engineer with 9+ years of experience spanning backend architecture, responsive frontends, and AI integration. Expertise across the full development lifecycle — from database schema design and distributed microservices to React/Angular/Vue UIs and mobile interfaces. Proven track record in high-load systems, real-time communications (Jitsi Meet, WebSockets), Big Data pipelines (ClickHouse, Kafka), and AI-driven document processing. Focused on building scalable, maintainable products end-to-end.

TECHNICAL SKILLS

Languages & Frameworks:

- Backend: Node.js (NestJS, Express), Python (FastAPI, Django), Go, TypeScript, GraphQL
- Frontend: React, Angular, Vue.js, TypeScript, Webpack, HTML5/CSS3

Data & Infrastructure:

- Databases: PostgreSQL, ClickHouse, Elasticsearch, Redis, MongoDB
- DevOps/Cloud: Docker, Kubernetes (K8S), AWS, Kafka, gRPC, CI/CD, Linux

Specialized:

- OpenCV, Jitsi Meet, AI-assisted development (Claude Opus, Copilot), WebSockets, RBAC

PROFESSIONAL EXPERIENCE

Dec 2025 — Present | Independent Contractor (Self-employed)

Senior Fullstack Developer / AI Engineer

- **AI-First Social Network (International Project):** Architected a full-scale video conferencing system (Jitsi Meet) end-to-end — backend, frontend, mobile UI/UX, deployment, and horizontal scaling. Used Claude Opus for rapid prototyping and architectural optimization. Part of a ~5-person AI-native engineering team serving hundreds of thousands of MAU.
- **FinTech:** Engineered an automated document recognition module (OpenCV) for KYC verification, deployed into the core internet banking platform. One of 4-6 senior fullstack engineers in a cross-functional team at a regional bank with a startup culture.
- **Digital Marketplace:** Expanded a platform for digital software and game sales (Node.js, NestJS, GraphQL, TypeORM). Implemented Debezium CDC to ensure reliable data synchronization across microservices.

Aug 2024 — Dec 2025 | Video Platform & Services LLC

Senior Backend Developer / Acting Team Lead

- Architected a 180+ API monolithic application with a robust RBAC system and optimized PostgreSQL schemas for complex relational queries.
- Designed a high-throughput S3 integration layer with multipart upload, resume, and automated EXIF metadata extraction.
- Decoupled PDF/Word generation into a dedicated async worker service, eliminating timeout failures during peak traffic loads.
- Optimized CI pipelines with multi-threaded database testing in Jest, reducing test execution time by 2x-3x.
- Served as Acting Team Lead for a 4-6 person backend division: conducted code reviews, managed task grooming and sprint prioritization, and authored the strategic design document for decomposing a 180+ API monolith into microservices.

Sep 2022 — Aug 2024 | CYBER-ROM

Backend Developer

- Built a microservices-based video service using NestJS, Go, gRPC, and Kafka, with automated Swagger API validation integrated into the CI/CD pipeline.
- Implemented a full-text search engine on Elasticsearch with custom Russian morphology and weighted relevance scoring, measurably improving search result quality.
- Designed and built a greenfield backend from scratch — PostgreSQL, Redis, S3, and 2FA — as the foundation for a new service.

Jul 2021 — Jun 2022 | Hiplabs

Fullstack Developer

- Developed secure FinTech services (NestJS, PrismaORM, PostgreSQL) deployed on Kubernetes (DigitalOcean) with automated CI/CD.
- Migrated a FoodTech platform to multi-tenant architecture while simultaneously rebuilding the frontend in ReactJS.

Jun 2020 — Jun 2021 | Independent Contractor (Self-employed)

Fullstack Developer

- **Algo-trading:** Built a high-frequency data pipeline (Python, ClickHouse) with custom TypeScript Grafana plugins for real-time financial data visualization.
- **B2B Energy Platform:** Developed a real-time messaging platform (Node.js, WebSocket) with KeyCloak SSO for enterprise security, paired with an Angular 9/10 admin panel.
- **Highload Messaging:** Built a high-throughput REST API (Go) for mass mailing campaigns, paired with a Vue SFC + TypeScript chat widget.

Feb 2016 — May 2020 | JetStyle

Fullstack Developer

- Built an industrial telemetry and predictive analytics system end-to-end — from firmware (C/Python) to Node.js processing and ClickHouse time-series storage.
- Reverse-engineered undocumented government SOAP protocols (MITM, JADX) to integrate legacy services into the platform.
- Built an MVP social networking platform for educators (Django, KnockoutJS) with Mailgun email and Web Push notifications.

EDUCATION

Master's Degree in Mobile Communications, Ural Federal University (UrFU), IRIT-RTF, 2014–2016.

Specializing in cellular network architecture, broadband communications and mesh networking.

Bachelor's Degree in Mobile Communications, Ural Federal University (UrFU), IRIT-RTF, 2010–2014.
Specializing in RF band analysis, low-level systems programming and network layer models (OSI).
